

Drop Period

Edo period

The Edo period (????, Edo jidai; Japanese pronunciation: [e.do (d)ʔi?.dai]), also known as the Tokugawa period (????, Tokugawa jidai; [to.kʔ.ʔa.wa (d)ʔi?

The Edo period (????, Edo jidai; Japanese pronunciation: [e.do (d)ʔi?.dai]), also known as the Tokugawa period (????, Tokugawa jidai; [to.kʔ.ʔa.wa (d)ʔi?.dai, -ʔa.wa-]), is the period between 1600 or 1603 and 1868 in the history of Japan, when the country was under the rule of the Tokugawa shogunate and some 300 regional daimyo, or feudal lords. Emerging from the chaos of the Sengoku period, the Edo period was characterized by prolonged peace and stability, urbanization and economic growth, strict social order, isolationist foreign policies, and popular enjoyment of arts and culture.

In 1600, Tokugawa Ieyasu prevailed at the Battle of Sekigahara and established hegemony over most of Japan, and in 1603 was given the title shogun by Emperor Go-Yōzei. Ieyasu resigned two years later in favor of his son Hidetada, but maintained power, and defeated the primary rival to his authority, Toyotomi Hideyori, at the Siege of Osaka in 1615 before his death the next year. Peace generally prevailed from this point on, making samurai largely redundant. Tokugawa shoguns continued Ieyasu's policies of conformity, including a formalization of social classes in a strict hierarchy. By 1639, all foreigners were expelled under the policy of sakoku, with the exception of Dutch traders on the island of Dejima in Nagasaki, beginning a period of isolation. From 1635, daimyō had to spend alternating years in the capital Edo, where their family was required to reside permanently, in a system of "alternate attendance" in order to keep them in check.

During the Edo period, merchants greatly prospered, and laid the foundation for Japan's later zaibatsu business conglomerates. Despite general restrictions on travel within the country, daimyō processions to and from Edo developed a network of roads and inns. A commoner culture emerged in Edo and cities such as Ōsaka and Kyōto, and art forms such as kabuki and ukiyo-e flourished. Japanese scholars developed schools of neo-Confucian philosophy, and samurai, now mostly employed as administrators, formalized their code of morality in the bushido code. In 1853, Japan was forcibly opened to Western trade by United States Commodore Matthew C. Perry, beginning the Bakumatsu ("end of the bakufu") era. The Edo period came to an end in 1868 with the Meiji Restoration and the Boshin War, which restored imperial rule to Japan.

Drop tube

In physics and materials science, a drop tube or drop tower is a structure used to produce a controlled period of weightlessness for an object under study

In physics and materials science, a drop tube or drop tower is a structure used to produce a controlled period of weightlessness for an object under study. Air bags, polystyrene pellets, and magnetic or mechanical brakes are sometimes used to arrest the fall of the experimental payload. In other cases, high-speed impact with a substrate at the bottom of the tower is an intentional part of the experimental protocol.

Not all such facilities are towers: NASA Glenn's Zero Gravity Research Facility is based on a vertical shaft, extending to 510 feet (155 m) below ground level.

Foot drop

normal gait cycle is affected by the drop foot syndrome. The normal gait cycle is as follows: Swing phase (SW): The period of time when the foot is not in

Foot drop is a gait abnormality in which the dropping of the forefoot happens out of weakness, irritation or damage to the deep fibular nerve (deep peroneal), including the sciatic nerve, or paralysis of the muscles in the anterior portion of the lower leg. It is usually a symptom of a greater problem, not a disease in itself. Foot drop is characterized by inability or impaired ability to raise the toes or raise the foot from the ankle (dorsiflexion). Foot drop may be temporary or permanent, depending on the extent of muscle weakness or paralysis, and it can occur in one or both feet. In walking, the raised leg is slightly bent at the knee to prevent the foot from dragging along the ground.

Foot drop can be caused by nerve damage alone or by muscle or spinal cord trauma, abnormal anatomy, toxins, or disease. Toxins include organophosphate compounds which have been used as pesticides and as chemical agents in warfare. The poison can lead to further damage to the body such as a neurodegenerative disorder called organophosphorus induced delayed polyneuropathy. This disorder causes loss of function of the motor and sensory neural pathways. In this case, foot drop could be the result of paralysis due to neurological dysfunction. Diseases that can cause foot drop include trauma to the posterolateral neck of fibula, stroke, amyotrophic lateral sclerosis, muscular dystrophy, poliomyelitis, Charcot–Marie–Tooth disease, multiple sclerosis, cerebral palsy, hereditary spastic paraplegia, Guillain–Barré syndrome, Welander distal myopathy, Friedreich's ataxia, chronic compartment syndrome, and severe nerve entrapment. It may also occur as a result of hip replacement surgery or knee ligament reconstruction surgery.

Domain drop catching

Domain drop catching, also known as domain sniping, is the practice of registering a domain name once registration has lapsed, immediately after expiry

Crime drop

The crime drop or crime decline is a pattern observed in many countries whereby rates of many types of crime declined by 50% or more beginning in the mid

The crime drop or crime decline is a pattern observed in many countries whereby rates of many types of crime declined by 50% or more beginning in the mid to late 1980s and early 1990s.

The crime drop is not a new phenomenon emerging in the 1990s. For Europe, crime statistics show a declining pattern since the late Middle Ages. From the 1960s to the 1980s and 1990s, crime rates rose in all wealthy Western countries before the decline continued. Irrespective of the reason for the increase, this period appears as a relatively short deviation of the long-term decline beginning centuries ago and continuing after the early 1990s.

There is no universally accepted explanation for why crime rates are falling, though many hypotheses have been proposed, especially in the United States. Many proposed explanations (such as increased incarceration rates or the use of leaded gasoline) have only occurred in specific countries, and cannot explain the decrease in other countries. Most crime experts agree that changes in policing or sentencing policies can also be excluded.

Full stop

formed by dropping the end of a word are properly given a period, but doing the same to those where some portion of the middle is dropped, "is ill advised";

The full stop (Commonwealth English), period (North American English), or full point . is a punctuation mark used for several purposes, most often to mark the end of a declarative sentence (as distinguished from a

question or exclamation).

A full stop is frequently used at the end of word abbreviations—in British usage, primarily truncations such as Rev., but not after contractions which retain the final letter such as Revd; in American English, it is used in both cases. It may be placed after an initial letter used to abbreviate a word. It is often placed after each individual letter in initialisms, (e.g., "U.S."), but not usually in those that are acronyms ("NATO"). However, the use of full stops after letters in initialisms is declining, and many of these without punctuation have become accepted norms (e.g., "UK" and "NATO"). When used in a series (typically of three, an ellipsis) the mark is also used to indicate omitted words.

In the English-speaking world, a punctuation mark identical to the full stop is used as the decimal separator and for other purposes, and may be called a point. In computing, it is called a dot. It is sometimes called a baseline dot to distinguish it from the interpunct (or middle dot).

Pitch drop experiment

and falls over a period of about a decade. Between 1961 and 2013, the experiment was supervised by John Mainstone [de]. The seventh drop fell at approximately

A pitch drop experiment is a long-term experiment which measures the flow of a piece of pitch over many years. "Pitch" is the name for any of a number of highly viscous liquids which appear solid, most commonly bitumen, also known as asphalt. At room temperature, tar pitch flows at a very low rate, taking several years to form a single drop.

One-drop rule

The one-drop rule was a legal principle of racial classification that was prominent in the 20th-century United States. It asserted that any person with

The one-drop rule was a legal principle of racial classification that was prominent in the 20th-century United States. It asserted that any person with even one ancestor of African ancestry ("one drop" of "black blood") is considered black (Negro or colored in historical terms). It is an example of hypodescent, the automatic assignment of children of a mixed union between different socioeconomic or ethnic groups to the group with the lower status, regardless of proportion of ancestry in different groups.

This concept became codified into the law of some U.S. states in the early 20th century. It was associated with the principle of "invisible blackness" that developed after the long history of racial interaction in the South, which had included the hardening of slavery as a racial caste system and later segregation. Before the rule was outlawed by the Supreme Court in the Loving v. Virginia decision of 1967, it was used to prevent interracial marriages and in general to deny rights and equal opportunities and uphold white supremacy.

Where's the Drop?

Where's the Drop? (stylized as where's the drop?) is an orchestral compilation album by Canadian electronic music producer Deadmau5. The album comprises

Where's the Drop? (stylized as where's the drop?) is an orchestral compilation album by Canadian electronic music producer Deadmau5. The album comprises re-imagined orchestral arrangements of his previous work, in collaboration with Gregory Reveret. It was released through Mau5trap, initially exclusively on the music streaming service Tidal on March 30, 2018. The album was released on other digital download services and on vinyl on June 29, 2018. A remix album, containing remixes of the tracks by various other artists, entitled Here's the Drop!, was released on October 4, 2019.

H-dropping

// and ? ?, see IPA § Brackets and transcription delimiters. *H-dropping or aitch-dropping is the deletion of the voiceless glottal fricative or 'H-sound'*;

H-dropping or aitch-dropping is the deletion of the voiceless glottal fricative or "H-sound", [h]. The phenomenon is common in many dialects of English, and is also found in certain other languages, either as a purely historical development or as a contemporary difference between dialects. Although common in most regions of England and in some other English-speaking countries, and linguistically speaking a neutral evolution in languages, H-dropping is often stigmatized as a sign of careless or uneducated speech, due to its strong association with the lower class.

The reverse phenomenon, H-insertion or H-adding, is found in certain situations, sometimes as an allophone or hypercorrection by H-dropping speakers, and sometimes as a spelling pronunciation or out of perceived etymological correctness. A particular example of this is the spread of 'haitch' for 'aitch'.
