== Subduction ==

As points of lithospheric spreading, mid-ocean ridges are the divergent boundaries where new crust is formed. Over long geological intervals, this new crust on the ocean floor pushes continents apart. If new crust is formed from these mid-ocean ridges, there must be other places where crust is equally destroyed or recycled into the interior of the Earth. Although, some crazy theories early in the 1900s proposed that the Earth expanded over time, ever growing bigger, maps of the occurrence of earthquakes and volcanoes revealed other places where Earth's crust appeared to be destroyed by a process of what is called Subduction. Subduction is the downward movement of a lithosphere plate into the deeper molten asthenosphere, and this downward motion of the lithosphere plate is a...

USB transfers can be of the type control, isochronous, interrupt, or bulk.

Control -

Interrupt - Midi 2.0

Bulk - Midi 1.0 ( 'send my data when you can' )

Isochronous - USBAudio, Webcams, etc (wip)

IsoChronous code is already in place in poseidon.library BUT transfers are not queued to be later rerouted in the host driver code (needs to be written for each host OCHI UCHI EHCI etc). There seems to be 2 types of isoc transfers that can be used by Poseidon. One is just the normal isoc transfer and the other is realtime implementation of isoc transfer. Setting up...

Buddhism originated in northern India in the 5th or 6th century BC. It was founded by a prince named Siddhartha Gautama (The Buddha) of a small kingdom that was evidently in what is now Nepal. He deserted his home and family and devoted himself to austerities and meditation in an effort to understand why the

world was full of suffering and how one could find happiness in such a place. Upon attaining awakening, he began to preach his teaching to others, and a movement came to form around him which continued to expand after his death. In general, one can say that there are two main varieties of Buddhism. The oldest collection of texts is written in a language called Pali, and hence is known as the Pali Canon. It is rather consistent internally and is believed to represent the actual teachings...

= Introduction =

== Main Goals ==

The main goals of the player in this game are two:

Capture all 151 Pokémon in order to complete the Pokédex.

Win the eight Gym Badges from the Gym Leaders to access and win the Pokémon League.

== Game Start ==

The player receives one Pokémon from Prof. Oak, which must be trained to make it stronger in order to defeat other trainer's Pokémon in battle or to weaken wild Pokémon which can be captured with a special artifact called Pokéball.

Every Pokémon that wins a battle receives Experience Points, which allow it to grow, achieving new levels, learning new, more powerful movements, and even evolving into greater, bigger Pokémon.

To help the trainer in his mission, there are objects which can be used to restore health to Pokémon or cure them from Special Conditions...

Fourth generation of video game consoles

== Trends ==

=== Improved hardware ===

During this generation pixel art in games becomes more much more advanced, often adopting the pointillism art style to the medium to great effect. Sprite based 2D graphics were essentially a solved problem by this generation, which lead to companies to look for ways to differentiate their graphics.

Game consoles also began using pre-rendered 3D Graphics and graphical techniques to give the impression of real 3D graphics running on hardware. Games using simple real time 3D polygons became popular, though they often required enhancement chips to draw just a few hundred polygons a second.

This generation audio improved drastically, with much more advanced audio systems.

=== CD capable consoles ===
