R-22 and R-410A Refrigerant Operating Pressures on Air Conditioning Units! - R-22 and R-410A Refrigerant Operating Pressures on Air Conditioning Units! 14 minutes, 56 seconds - Our Ebook, Paperback, Workbook, Quick Cards: <https://www.acservicetech.com/the-book> This video is on Normal Operating ...

HVAC Training - Pressure Guages and the Pressure Temperature Chart - HVAC Training - Pressure Guages and the Pressure Temperature Chart 5 minutes, 21 seconds - <http://www.hvactrainingsolutions.net> HVAC Training - A short lesson on how our refrigeration gauges relate the a pressure ...

R-22 Subcooling Examples! Check The Charge with 4 Different Scenarios! - R-22 Subcooling Examples! Check The Charge with 4 Different Scenarios! 6 minutes, 24 seconds - In this HVAC Training Video, I Show 4 Examples for You **to**, Check the **R-22**, Refrigerant Charge Using the Subcooling Method.

Four Scenarios Subcooling: R-22

Temp Meter is used to determine line temp.

227 PSI on the high side

227 PSI = 110°F Sat Temp

Target Subcooling can often be found on the outdoor unit rating plate.

Scenario 2

319 PSI on the high side

97°F Liquid Line Temp

System is Undercharged

Adding refrigerant will increase the Subcooling.

When adding refrigerant, add to the low side, while the system is running.

### Scenario 3

84°F Liquid Line Temp

°F Sat Temp - 84°F Line Temp

### Scenario 4

92°F Liquid Line Temp

20°F Subcooling

To recover refrigerant while the system is running, recover from the high pressure side.

As refrigerant is recovered from the system, the subcooling will lower, bringing the total closer to the target subcooling.

After checking Subcooling on a system with a TXV, the Superheat must still be checked.

Subcooling is calculated on the high side of the system, on the red gauge and liquid line.

Total Superheat is calculated on the low side of the system, on the blue gauge and vapor line.

Total Superheat is measured to ensure that the TXV is operating properly.

74 PSI on the low side.

74 PSI = 43°F Sat Temp

55°F Vapor Line Temp

In a system that is correctly charged or overcharged, if the TXV is operating correctly, it tries to maintain an accurate Total Superheat.

Mastering R22 Performance Charts: Your Key to Precision ?? - Mastering R22 Performance Charts: Your Key to Precision ?? 8 minutes, 50 seconds - Unlock the full potential of the **R22**, with performance **charts**,. Learn how **to**, interpret hover **charts**,, density altitude data, and the ...
