

Import Procedures And Documentation

CE marking

request. Importers of products have to verify that the manufacturer outside the EU has undertaken the necessary steps and that the documentation is available

The presence of the CE marking on commercial products indicates that the manufacturer or importer affirms the goods' conformity with European health, safety, and environmental protection standards. It is not a quality indicator or a certification mark. The CE marking is required for goods sold in the European Economic Area (EEA); goods sold elsewhere may also carry the mark.

The CE mark indicates that the product may be traded freely in any part of the European Economic Area, regardless of its country of origin. It consists of the CE letter pair and, if applicable, the four digit identification number of the notified body involved in the conformity assessment procedure.

Cartagena Protocol on Biosafety

appropriate documentation specifying, among other things, identity of LMOs and contact point for further information. These procedures and requirements

The Cartagena Protocol on Biosafety to the Convention on Biological Diversity is an international agreement on biosafety as a supplement to the Convention on Biological Diversity (CBD) effective since 2003. The Biosafety Protocol seeks to protect biological diversity from the potential risks posed by genetically modified organisms resulting from modern biotechnology.

The Biosafety Protocol makes clear that products from new technologies must be based on the precautionary principle and allow developing nations to balance public health against economic benefits. It will for example let countries ban imports of genetically modified organisms if they feel there is not enough scientific evidence that the product is safe and requires exporters to label shipments containing genetically altered commodities such as corn or cotton.

The required number of 50 instruments of ratification/accession/approval/acceptance by countries was reached in May 2003. In accordance with the provisions of its Article 37, the Protocol entered into force on 11 September 2003. As of July 2020, the Protocol had 173 parties, which includes 170 United Nations member states, the State of Palestine, Niue, and the European Union.

Import

Import is the activity within international trade which involves buying and receiving goods and services produced in another country. An importer is a

Import is the activity within international trade which involves buying and receiving goods and services produced in another country. An importer is a person, organization or country receiving imported goods which have been exported from another country. Importation and exportation are the defining financial transactions of international trade. The seller of such goods and services is called an exporter.

In international trade, the importation and exportation of goods are limited by import quotas and mandates from the customs authority. The importing and exporting jurisdictions may impose a tariff (tax) on the goods. In addition, the importation and exportation of goods are subject to trade agreements between the importing and exporting jurisdictions.

Voluntary export restraint

JOHNSON, Thomas E.; BADE, Donna L. (2010-04-15). *Export/Import Procedures and Documentation*. AMACOM Div American Mgmt Assn. ISBN 9780814415511. "Voluntary

A voluntary export restraint (VER) or voluntary export restriction is a self-imposed, voluntary restriction implemented by an exporting country, on the volume of its exports to another country. This can be negotiated between governments, or with the competing industries.

By this definition, the term VER is a generic reference for all bilaterally agreed measures to restrain exports. They are sometimes referred to as 'Export Visas'. The restraint could be a preset limit, a reduction in the exported amount, or a complete restriction.

Typically, VERs arise when industries seek protection from competing imports from another country. Then, through negotiations, the exporting country may choose to implement VERs to appease the importing country, and deter it from imposing explicit (and less flexible) trade barriers, such as tariffs and import quotas.

The implementation of VERs was prohibited in 1994 under modifications to the General Agreement on Tariffs and Trade (Article 11), with member countries also agreeing to phase out existing VERs.

Comparison of programming languages (syntax)

*namespace::subnamespace::Class; – C++ Procedure/function import from module import function – Python
import package.module : symbol; – D import package.module : altsymbolname*

This article compares the syntax of many notable programming languages.

Uganda Clearing Industry & Forwarding Association

and procedures. UCIFA updates clients on changes that occur from time to time. It facilitates import and export operations in the most efficient and cost

Uganda Clearing Industry & Forwarding Association (UCIFA website) is a member-owned institution with over 200 companies licensed by URA (Uganda Revenue Authority). Its secretariat is located in Nakawa, Kampala on Jinja Road, opposite Spear Motors.

With the slogan "Bridging the Gap of Tax Collection", UCIFA's activities are based on the foundations of professionalism and well established working synergies with stakeholders at both national and international levels. It also used to be referred to as Uganda Clearing and Forwarding Agents Association (UCFAA) and the Uganda Clearing Industry and Forwarders Association.

Java Database Connectivity

*call stored procedures in the database), see the JDBC API Guide documentation. import
java.sql.Connection; import java.sql.DriverManager; import java.sql*

Java Database Connectivity (JDBC) is an application programming interface (API) for the Java programming language which defines how a client may access a database. It is a Java-based data access technology used for Java database connectivity. It is part of the Java Standard Edition platform, from Oracle Corporation. It provides methods to query and update data in a database, and is oriented toward relational databases. A JDBC-to-ODBC bridge enables connections to any ODBC-accessible data source in the Java virtual machine (JVM) host environment.

Grey import vehicle

Grey import vehicles are new or used motor vehicles and motorcycles legally imported from another country through channels other than the maker's official

Grey import vehicles are new or used motor vehicles and motorcycles legally imported from another country through channels other than the maker's official distribution system or a third-party channel officially authorized by the manufacturer. The synonymous term parallel import is sometimes substituted.

Car makers frequently arbitrage markets, setting the price according to local market conditions so the same vehicle will have different real prices in different territories. Grey import vehicles circumvent this profit-maximization strategy. Car makers and local distributors sometimes regard grey imports as a threat to their network of franchised dealerships, but independent distributors do not since more cars of an odd brand bring in money from service and spare parts.

In order for the arbitrage to work, there must be some means to reduce, eliminate, or reverse whatever savings could be achieved by purchasing the car in the lower-priced territory. Examples of such barriers include regulations preventing import or requiring costly vehicle modifications. In some countries, such as Vietnam, the import of grey-market vehicles has largely been banned.

Rocq

prover but includes automatic theorem proving tactics (procedures) and various decision procedures. The Association for Computing Machinery awarded Thierry

The Rocq Prover (previously known as Coq) is an interactive theorem prover first released in 1989. It allows the expression of mathematical assertions, mechanical checking of proofs of these assertions, assists in finding formal proofs using proof automation routines and extraction of a certified program from the constructive proof of its formal specification.

Rocq works within the theory of the calculus of inductive constructions, a derivative of the calculus of constructions. Rocq is not an automated theorem prover but includes automatic theorem proving tactics (procedures) and various decision procedures.

The Association for Computing Machinery awarded Thierry Coquand, Gérard Huet, Christine Paulin-Mohring, Bruno Barras, Jean-Christophe Filliâtre, Hugo Herbelin, Chetan Murthy, Yves Bertot, and Pierre Castéran with the 2013 ACM Software System Award for Rocq (when it was still named Coq).

Single-window system

and businesses to submit standardised information and documents through a single entry point to fulfil all regulatory requirements related to import,

A Single Window (SW) is a trade facilitation concept that enables traders and businesses to submit standardised information and documents through a single entry point to fulfil all regulatory requirements related to import, export, and transit. It simplifies and streamlines interactions with government authorities, thereby improving efficiency and reducing costs and delays in cross-border trade.

The National Single Window (NSW) system allows and consolidates traders to submit documentation and data requirements for importation, exportation, or transit of goods through a single entry point. This system aims to simplify trade procedures, reduce costs, and improve efficiency in international trade.

The Single Window (SW) is widely recognised as a key enabler of trade facilitation and has received global endorsement through international frameworks, conventions, and agreements. Its adoption is seen as a benchmark for modernising customs and trade procedures, improving transparency, and promoting seamless cross-border trade.
