

5 In A Percent

Five-Percent Nation

Five-Percent Nation, sometimes referred to as the Nation of Gods and Earths (NGE/NOGE) or the Five Percenters, is a cultural movement founded in 1964 in the

The Five-Percent Nation, sometimes referred to as the Nation of Gods and Earths (NGE/NOGE) or the Five Percenters, is a cultural movement founded in 1964 in the Harlem section of the borough of Manhattan, New York City, by Clarence 13X, who was previously known as Clarence Edward Smith.

Members of the group call themselves Allah's Five Percenters, which reflects the concept that ten percent of the people in the world are elites and their agents, who know the truth of existence and opt to keep eighty-five percent of the world in ignorance and under their controlling thumb; the remaining five percent are those who know the truth and are determined to enlighten the eighty-five percent.

The Nation of Gods and Earths teaches the belief that Black people are the original people of the planet Earth and are therefore the fathers ("Gods") and mothers ("Earths") of civilization. The Nation teaches that Supreme Mathematics and Supreme Alphabet, a set of principles created by Allah the Father, is the key to understanding humankind's relationship to the universe. The Nation teaches that the black man, insofar as the Nation defines this race, is himself God, with the black race being a race of actual gods.

Percent-encoding

as percent-encoding, is a method to encode arbitrary data in a uniform resource identifier (URI) using only the US-ASCII characters legal within a URI

URL encoding, officially known as percent-encoding, is a method to encode arbitrary data in a uniform resource identifier (URI) using only the US-ASCII characters legal within a URI. Percent-encoding is used to ensure special characters do not interfere with the URI's structure and interpretation. Special characters are replaced with a percent sign (%) followed by two hexadecimal digits representing the character's byte value. For example, a space is commonly encoded as %20:

original: <http://example.com/my file.txt>

encoded: <http://example.com/my%20file.txt>

Although it is known as URL encoding, it is also used more generally within the main Uniform Resource Identifier (URI) set, which includes both Uniform Resource Locator (URL) and Uniform Resource Name (URN). Consequently, it is also used in the preparation of data of the application/x-www-form-urlencoded media type, as is often used in the submission of HTML form data in HTTP requests. Percent-encoding is not case-sensitive.

Percent sign

The percent sign % (sometimes per cent sign in British English) is the symbol used to indicate a percentage, a number or ratio as a fraction of 100. Related

The percent sign % (sometimes per cent sign in British English) is the symbol used to indicate a percentage, a number or ratio as a fraction of 100. Related signs include the permille (per thousand) sign ‰ and the permyriad (per ten thousand) sign ‰ (also known as a basis point), which indicate that a number is divided by one thousand or ten thousand, respectively. Higher proportions use parts-per notation.

3.5% rule

The 3.5% rule is a concept in political science that states that when 3.5% of the population of a country protest nonviolently against a government, that

The 3.5% rule is a concept in political science that states that when 3.5% of the population of a country protest nonviolently against a government, that government is likely to fall from power. The rule was formulated by Erica Chenoweth in 2013. It arose out of insights originally published by political scientist Mark Lichbach in 1995 in his book *The Rebel's Dilemma: Economics, Cognition, and Society*.

Percentage point

moving up from 40 percent to 44 percent is an increase of 4 percentage points (although it is a 10-percent increase in the quantity being measured, if

A percentage point or percent point is the unit for the arithmetic difference between two percentages. For example, moving up from 40 percent to 44 percent is an increase of 4 percentage points (although it is a 10-percent increase in the quantity being measured, if the total amount remains the same). In written text, the unit (the percentage point) is usually either written out, or abbreviated as pp, p.p., or %pt. to avoid confusion with percentage increase or decrease in the actual quantity. After the first occurrence, some writers abbreviate by using just "point" or "points".

Integrated Food Security Phase Classification

August 2025 with a third of the population expected to face IPC Phase 5 famine, 58 percent facing IPC Phase 4 emergency, and 20 percent facing IPC Phase

The Integrated Food Security Phase Classification (IPC), also known as IPC scale, is a tool for improving food security analysis and decision-making. It is a standardised scale that integrates food security, nutrition and livelihood information into a statement about the nature and severity of a crisis and implications for strategic response.

The IPC was originally developed in 2004 for use in Somalia by the United Nations Food and Agriculture Organization's Food Security Analysis Unit (FSAU). Several national governments and international agencies, including CARE International, European Commission Joint Research Centre (EC JRC), Food and Agricultural Organization of the United Nations (FAO), USAID/FEWS NET, Oxfam GB, Save the Children UK/US, and United Nations World Food Programme (WFP), have been working together to adapt it to other food security contexts.

Percent (album)

Percent is the second Korean-language studio album by South Korean singer Onew. It was released on July 15, 2025, through Griffin Entertainment. The album

Percent is the second Korean-language studio album by South Korean singer Onew. It was released on July 15, 2025, through Griffin Entertainment. The album contains eleven songs, including singles "Mad", "Confidence" and "Animals". It peaked at number four on South Korea's Circle Album Chart.

Nicole Collier

With 32,953 votes (76.5 percent), Collier defeated the Republican candidate, Stephen A. West, who polled 9,384 votes (21.8 percent), and the Libertarian

Nicole Denise Johnson Collier (born September 12, 1972) is a Democratic member of the Texas House of Representatives. Since 2013, she has represented District 95 in Fort Worth, Texas. Collier succeeded Marc Veasey.

A small business owner and trial lawyer, Collier is a 1996 graduate of the University of Houston. She graduated from the Texas Wesleyan University School of Law in Fort Worth, now Texas A&M University School of Law.

In the general election on November 4, 2014, Collier won her second term in the Texas House by defeating Republican candidate, Albert G. McDaniel, by a margin of 21,908 votes (75.8 percent) to 7,002 votes (24.2 percent).

Collier won her fourth legislative term in the general election held on November 6, 2018. With 32,953 votes (76.5 percent), Collier defeated the Republican candidate, Stephen A. West, who polled 9,384 votes (21.8 percent), and the Libertarian Party choice, Joshua G. Burns, who drew 734 (1.7 percent).

On August 18, 2025, Collier, Rep. Gene Wu and Rep. Vince Perez, was held against their will within the Texas State Capitol and barred from leaving for refusing to agree to DPS police escorts due to a quorum dispute over redistricting, which she and others Democratic had claimed to be gerrymandering.

List of countries by inequality-adjusted income

Vast Majority Income (VMI): A New Measure of Global Inequality; Policy Research Brief. List of countries by share of income of the richest one percent

This is a list of countries by inequality-adjusted income, as defined and measured by the United Nations Development Programme (UNDP). The income index is one component of the Human Development Index (HDI), but is also used separately.

Adjusting income for inequality based on the Gini coefficient was first proposed by Amartya Sen in 1976. The UN first applied the adjustment to income data in 1993, before it was later expanded to the general HDI.

Relative change

be the same. A special case of percent change (relative change expressed as a percentage) called percent error occurs in measuring situations where the

In any quantitative science, the terms relative change and relative difference are used to compare two quantities while taking into account the "sizes" of the things being compared, i.e. dividing by a standard or reference or starting value. The comparison is expressed as a ratio and is a unitless number. By multiplying these ratios by 100 they can be expressed as percentages so the terms percentage change, percent(age) difference, or relative percentage difference are also commonly used. The terms "change" and "difference" are used interchangeably.

Relative change is often used as a quantitative indicator of quality assurance and quality control for repeated measurements where the outcomes are expected to be the same. A special case of percent change (relative change expressed as a percentage) called percent error occurs in measuring situations where the reference value is the accepted or actual value (perhaps theoretically determined) and the value being compared to it is experimentally determined (by measurement).

The relative change formula is not well-behaved under many conditions. Various alternative formulas, called indicators of relative change, have been proposed in the literature. Several authors have found log change and log points to be satisfactory indicators, but these have not seen widespread use.
