Support may refer to:

Customer support

Customer support is a range of services to assist customers in making cost effective and correct use of a product. It includes assistance in planning

Customer support is a range of services to assist customers in making cost effective and correct use of a product. It includes assistance in planning, installation, training, troubleshooting, maintenance, upgrading, and disposal of a product. Regarding technology products such as mobile phones, televisions, computers, software products or other electronic or mechanical goods, it is termed technical support.

Phone and emails are the primary means to offer web-based assistance for your customers when matters do not require an immediate answer. Low-cost, non-intrusive and anywhere-anytime access are some of the advantages of email-based communications. Ticketing System and CRM Applications help keep track of a series of follow-up correspondence with a particular customer. Services offered via email response management is claims processing, polling/media analysis, subscription services, troubleshooting, complaint registrations etc.

Technical support

Technical support, commonly shortened as tech support, is a customer service provided to customers to resolve issues, commonly with consumer electronics

Technical support, commonly shortened as tech support, is a customer service provided to customers to resolve issues, commonly with consumer electronics. This is commonly provided via call centers, online chat and email. Many companies provide discussion boards for users to provide support to other users, decreasing load and cost on these companies.

Peer support

Peer support occurs when people provide knowledge, experience, emotional, social or practical help to each other. It commonly refers to an initiative

Peer support occurs when people provide knowledge, experience, emotional, social or practical help to each other. It commonly refers to an initiative consisting of trained supporters (although it can be provided by peers without training), and can take a number of forms such as peer mentoring, reflective listening (reflecting content and/or feelings), or counseling. Peer support is also used to refer to initiatives where colleagues, members of self-help organizations and others meet, in person or online, as equals to give each other connection and support on a reciprocal basis.

Peer support is distinct from other forms of social support in that the source of support is a peer, a person who is similar in fundamental ways to the recipient of the support; their relationship is one of equality. A peer is in a position to offer support by virtue of relevant experience: he or she has "been there, done that" and can relate to others who are now in a similar situation. Trained peer support workers such as peer support

specialists and peer counselors receive special training and are required to obtain Continuing Education Units, like clinical staff. Some other trained peer support workers may also be law-enforcement personnel and firefighters as well as emergency medical responders The social peer support also offers an online system

of distributed expertise, interactivity, social distance and control, which may promote

disclosure of personal problems (Paterson, Brewer, & Leeseberg, 2013).

Support (mathematics)

In mathematics, the support of a real-valued function f {\displaystyle f} is the subset of the function domain of elements that are not mapped to zero

In mathematics, the support of a real-valued function

f

{\displaystyle f}

is the subset of the function domain of elements that are not mapped to zero. If the domain of

f

{\displaystyle f}

is a topological space, then the support of

f

{\displaystyle f}

is instead defined as the smallest closed set containing all points not mapped to zero. This concept is used widely in mathematical analysis.

Operation Support

Operation SUPPORT is the name given to Canadian Forces activities directly after the terrorist attacks of September 11, 2001. The CF had two immediate

Operation SUPPORT is the name given to Canadian Forces activities directly after the terrorist attacks of September 11, 2001. The CF had two immediate goals: to provide support for stranded aircrew and passengers from diverted commercial flights, and to increase emergency preparedness. Transport Canada called their operation Yellow Ribbon.

Stranded travellers were received at several CF bases and stations, including Goose Bay, Gander and Stephenville, Newfoundland and Labrador, and Halifax Regional Municipality Airport

in, Shearwater, Nova Scotia and Aldershot, Nova Scotia. Also, CF units in the Atlantic region provided thousands of beds and ration packs; nine CF transport aircraft delivered about 8,800 cots, 8,300 blankets and 55 support personnel to places where commercial flights had been diverted. CF aircraft also transported Canada Customs and Revenue Agency officials to those locations so stranded travellers could clear Customs and enter Canada — many of them to accept the hospitality of the communities in which they found themselves.

Several steps were taken to increase emergency preparedness. Additional CF-18 fighters were assigned to NORAD. The Disaster Assistance Response Team (DART) was placed on stand-by at 8 Wing Trenton, Ontario. Also, HMC Ships Preserver, Iroquois and Ville de Québec were put in a higher state of readiness in case they were required to go to a U.S. port to provide humanitarian assistance.

Support vector machine

In machine learning, support vector machines (SVMs, also support vector networks) are supervised max-margin models with associated learning algorithms

In machine learning, support vector machines (SVMs, also support vector networks) are supervised max-margin models with associated learning algorithms that analyze data for classification and regression analysis. Developed at AT&T Bell Laboratories, SVMs are one of the most studied models, being based on statistical learning frameworks of VC theory proposed by Vapnik (1982, 1995) and Chervonenkis (1974).

In addition to performing linear classification, SVMs can efficiently perform non-linear classification using the kernel trick, representing the data only through a set of pairwise similarity comparisons between the original data points using a kernel function, which transforms them into coordinates in a higher-dimensional feature space. Thus, SVMs use the kernel trick to implicitly map their inputs into high-dimensional feature spaces, where linear classification can be performed. Being max-margin models, SVMs are resilient to noisy data (e.g., misclassified examples). SVMs can also be used for regression tasks, where the objective becomes

?

${\displaystyle \epsilon }$

-sensitive.

The support vector clustering algorithm, created by Hava Siegelmann and Vladimir Vapnik, applies the statistics of support vectors, developed in the support vector machines algorithm, to categorize unlabeled data. These data sets require unsupervised learning approaches, which attempt to find natural clustering of the data into groups, and then to map new data according to these clusters.

The popularity of SVMs is likely due to their amenability to theoretical analysis, and their flexibility in being applied to a wide variety of tasks, including structured prediction problems. It is not clear that SVMs have better predictive performance than other linear models, such as logistic regression and linear regression.

Support and resistance

In stock market technical analysis, support and resistance are certain predetermined levels of the price of a security at which it is thought that the price will tend to stop and reverse. These levels are denoted by multiple touches of price without a breakthrough of the level.

Trestle support

In structural engineering, a trestle support (or simply trestle) is a structural element with rigid beams forming the equal sides of two parallel isosceles

In structural engineering, a trestle support (or simply trestle) is a structural element with rigid beams forming the equal sides of two parallel isosceles triangles, joined at their apices by a plank or beam. Sometimes additional rungs are stretched between the two beams. A pair of trestle legs can support one or several boards

or planks, forming a trestle table or trestle desk. A network of trestle supports can serve as the framework for a trestle bridge, and a trestle of appropriate size to hold wood for sawing is known as a sawhorse.

Bernie Sanders

progressive policies, he opposes neoliberalism and supports workers' self-management. He supports universal and single-payer healthcare, paid parental

Bernard Sanders (born September 8, 1941) is an American politician and activist serving as the senior United States senator from Vermont, a seat he has held since 2007. He is the longest-serving independent in U.S. congressional history, but maintains a close relationship with the Democratic Party, having caucused with House and Senate Democrats for most of his congressional career and sought the party's presidential nomination in 2016 and 2020. Sanders has been viewed as one of the main leaders of the modern American progressive movement.

Born into a working-class Jewish family and raised in New York, Sanders attended Brooklyn College before graduating from the University of Chicago in 1964. While a student, he was a protest organizer for the Congress of Racial Equality (CORE) and the Student Nonviolent Coordinating Committee (SNCC) during the civil rights movement. After settling in Vermont in 1968, he ran unsuccessful third-party political campaigns in the 1970s. He was elected mayor of Burlington in 1981 as an independent and was reelected three times.

Sanders was elected to the U.S. House of Representatives in 1990, representing Vermont's at-large congressional district. In 1991, he and five other House members co-founded the Congressional Progressive Caucus. Sanders was a U.S. representative for 16 years before being elected to the U.S. Senate in 2006, becoming the first non-Republican elected to Vermont's Class 1 seat since Whig Solomon Foot in 1850. Sanders was reelected in 2012, 2018, and 2024. He chaired the Senate Veterans' Affairs Committee from 2013 to 2015, the Senate Budget Committee from 2021 to 2023, and the Senate Health, Education, Labor and Pensions Committee from 2023 to 2025. He is the senior senator and dean of the Vermont congressional delegation.

Sanders was a candidate for the Democratic presidential nomination in 2016 and 2020, finishing second both times. His 2016 campaign generated significant grassroots enthusiasm and funding from small-dollar donors, helping him win 23 primaries and caucuses. In 2020, his strong showing in early primaries and caucuses made him the front-runner in a large field of Democratic candidates. He became a close ally of Joe Biden after the 2020 primaries. Since Donald Trump's reelection as president in 2024, Sanders has vocally opposed Trump's administration and perceived corruption as what he calls a right-wing oligarchy, rallying an organization tour against Trump and his allies, especially Elon Musk, in an effort to reshape the Democratic Party.

Sanders is credited with influencing a leftward shift in the Democratic Party after his 2016 campaign. An advocate of progressive policies, he opposes neoliberalism and supports workers' self-management. He supports universal and single-payer healthcare, paid parental leave, tuition-free tertiary education, a Green New Deal, and worker control of production through cooperatives, unions, and democratic public enterprises. On foreign policy, he supports reducing military spending, more diplomacy and international cooperation, and greater emphasis on labor rights and environmental concerns in negotiating international trade agreements. Sanders supports workplace democracy and has praised elements of the Nordic model. Several outlets have compared his politics to left-wing populism and President Franklin D. Roosevelt's New Deal.
