Pāṇini

Staal, A reader on the Sanskrit Grammarians Pāṇini (/pāṇini/; Sanskrit: पणिनी, pāṇini [pāṇinī]) was a Sanskrit grammarian, logician, philologist,

Pāṇini (; Sanskrit: पणिनी, pāṇini [pāṇinī]) was a Sanskrit grammarian, logician, philologist, and revered scholar in ancient India during the mid-1st millennium BCE, dated variously by most scholars between the 6th–5th and 4th century BCE.

The historical facts of his life are unknown, except only what can be inferred from his works, and legends recorded long after. His most notable work, the *Aṣṭādhyāyī*, is conventionally taken to mark the start of Classical Sanskrit. His work formally codified Classical Sanskrit as a refined and standardized language, making use of a technical metalanguage consisting of a syntax, morphology, and lexicon, organised according to a series of meta-rules.

Since the exposure of European scholars to his *Aṣṭādhyāyī* in the nineteenth century, Pāṇini has been considered the "first descriptive linguist", and even labelled as "the father of linguistics". His approach to grammar influenced such foundational linguists as Ferdinand de Saussure and Leonard Bloomfield.

Giovanni Paolo, also known as Gian Paolo Panini or Pannini (17 June 1691 – 21 October 1765), was an Italian Baroque painter and architect who worked in Rome and is primarily known as one of the vedutisti ("view painters"). As a painter, Panini is best known for his vistas of Rome, in which he took a particular interest in the city's antiquities. Among his most famous works are his view of the interior of the Pantheon (on behalf of Francesco Algarotti), and his vedute—paintings of picture galleries containing views of Rome. Most of his works, especially those of ruins, have a fanciful and unreal embellishment characteristic of capriccio themes. In this they resemble the capricci of Marco Ricci. Panini also painted portraits, including one of Pope Benedict XIV.

Backus–Naur form

In 1967, Peter Zilahy Ingerman suggested renaming it P?ini Backus form to acknowledge P?ini's earlier, independent development of a similar notation

In computer science, Backus–Naur form (BNF, pronounced), also known as Backus normal form, is a notation system for defining the syntax of programming languages and other formal languages, developed by John Backus and Peter Naur. It is a metasyntax for context-free grammars, providing a precise way to outline the rules of a language's structure.

It has been widely used in official specifications, manuals, and textbooks on programming language theory, as well as to describe document formats, instruction sets, and communication protocols. Over time, variations such as extended Backus–Naur form (EBNF) and augmented Backus–Naur form (ABNF) have emerged, building on the original framework with added features.
