Wordle is a web-based word game created and developed by the Welsh software engineer Josh Wardle. In the game, players have six attempts to guess a five-letter word, receiving feedback through colored tiles that indicate correct letters and their placement. A single puzzle is released daily, with all players attempting to solve the same word. It was inspired by word games like Jotto and the game show Lingo.

Originally developed as a personal project for Wardle and his partner, Wordle was publicly released in October 2021. It gained widespread popularity in late 2021 after the introduction of a shareable emoji-based results format, which led to viral discussion on social media. The game's success spurred the creation of numerous clones, adaptations in other languages, and variations with unique twists. It has been well-received, being played 4.8 billion times during 2023.

The New York Times Company acquired Wordle in January 2022 for a "low seven-figure sum". The game remained free but underwent changes, including the removal of offensive or politically sensitive words and the introduction of account logins to track stats. Wordle was later added to the New York Times Crossword app (later The New York Times Games) and accompanied by WordleBot, which gave players analysis on their gameplay. In November 2022, Tracy Bennett became the game's first editor, refining word selection.
