Permanent Vacation". Metal Forces (25). Retrieved July 5, - Permanent Vacation is the ninth studio album by American rock band Aerosmith, released by Geffen Records on August 25, 1987. The album marks the band's shift to a pop-metal sound that they would maintain up to 2001's Just Push Play.

It was their first to employ songwriters outside the band, instead of featuring songs solely composed by them. This came at the suggestion of executive John Kalodner. He also pushed the band to work with producer Bruce Fairbairn, who remained with them for another two albums. It was also the first Aerosmith album to be promoted by heavy music video airplay on MTV. Though Done with Mirrors was intended to mark Aerosmith's comeback, Permanent Vacation is often considered their true comeback, as it was the band's first truly popular album since their reunion. "Rag Doll", "Dude (Looks Like a Lady)", and "Angel" became major hits (all three charted in the Top 20) and helped Permanent Vacation become the band's biggest success in a decade.

Permanent Vacation has sold over five million copies in the U.S. In the UK, it was the first Aerosmith album to attain both Silver (60,000 units sold) and Gold (100,000 units sold) certification by the British Phonographic Industry, achieving these in July 1989 and March 1990 respectively.

Centaurus X-3 (4U 1118–60) is an X-ray pulsar with a period of 4.84 seconds. It was the first X-ray pulsar to be discovered, and the third X-ray source to be discovered in the constellation Centaurus. The system consists of a neutron star orbiting a massive, O-type supergiant star dubbed Krzemi?ski's star after its discoverer, Wojciech Krzemi?ski. Matter is being accreted from the star onto the neutron star, resulting in X-ray emission.

It is sometimes called the Madhava–Leibniz series as it was first discovered by the Indian mathematician Madhava of Sangamagrama or his followers in the 14th–15th century (see Madhava series), and was later independently rediscovered by James Gregory in 1671 and Leibniz in 1673. The Taylor series for the inverse tangent function, often called Gregory's series, is

The 5.56×45mm NATO (official NATO nomenclature 5.56 NATO, commonly pronounced "five-five-six") is a rimless bottlenecked centerfire intermediate cartridge family developed in the late 1970s in Belgium by FN Herstal. It consists of the SS109, L110, and SS111 cartridges. On 28 October 1980, under STANAG 4172, it was standardized as the second standard service rifle cartridge for NATO forces as well as many non-NATO countries. Though they are not identical, the 5.56×45mm NATO cartridge family was derived from the .223 Remington cartridge designed by Remington Arms in the early 1960s, which has a near-identical case but fires a slightly larger 5.70 mm (.2245 in) projectile.

X-Men: The Last Stand (also marketed as X3: The Last Stand, or X-Men 3) is a 2006 superhero film based on the X-Men comic books published by Marvel Entertainment Group. It is the sequel to X2 (2003) and the third installment in the X-Men film series, as well as the final film of the original X-Men trilogy. It was directed by Brett Ratner and features an ensemble cast including Hugh Jackman, Halle Berry, Ian McKellen, Famke Janssen, Anna Paquin, Kelsey Grammer, James Marsden, Rebecca Romijn, Shawn Ashmore, Aaron Stanford, Vinnie Jones, and Patrick Stewart. Written by Simon Kinberg and Zak Penn, the film is loosely based on two X-Men comic book story arcs, "Gifted" and "The Dark Phoenix Saga", with a plot that revolves around a "mutant cure" that causes serious repercussions among mutants and humans, and on the resurrection of Jean Grey who unleashes a dark force.

Bryan Singer, who had directed the two previous films, X-Men and X2, decided to leave the sequel to work on Superman Returns (2006). X2 composer and editor John Ottman and X2 writers Dan Harris and Michael Dougherty also left to work on Superman Returns, as did James Marsden, who had very limited screen time in The Last Stand before his character was killed off due to his departure from the film. Singer had not even defined the storyline for a third film. Matthew Vaughn, who co-wrote the script (though uncredited) and was initially hired as the new director, left due to personal and professional issues, and was replaced with Ratner. Filming took place from August 2005 to January 2006 with a budget of \$210 million, and was consequently the most expensive film ever made at the time of its release. It had extensive visual effects created by 11 different companies.

X-Men: The Last Stand premiered in the Out of Competition section at the 2006 Cannes Film Festival, and was released theatrically in the United States on May 26 by 20th Century Fox. It grossed approximately \$459

million worldwide, becoming the seventh-highest-grossing film of 2006; it was at the time the highest-grossing film in the series and after 2018 stood as the fourth-highest-grossing film of the franchise. It received mixed reviews from critics. A standalone sequel, *The Wolverine*, was released in 2013; it was followed by *X-Men: Days of Future Past* in 2014, which retconned the events of *The Last Stand*.

Persona 5: The Phantom X is a 2025 role-playing video game developed by Black Wings Game Studio and published by Perfect World in China and South Korea, Iwplay World in Taiwan and South Korea and Sega worldwide. The game is a spin-off of Atlus' Persona series, itself a part of the larger Megami Tensei franchise. An open beta in China began on April 12, 2024; it was released worldwide in English on June 26, 2025, for Android, iOS, and Windows.

Staff members from Persona 5 were involved in the development, including series producer Kazuhisa Wada as project supervisor, artist Shigenori Soejima designing the protagonist Wonder, and Ryota Kozuka composing the main theme. The game takes place in modern-day Tokyo and follows a group of characters that wield the power of Persona. It combines elements of social simulation, as the protagonist uses his free time to raise stats and forge bonds with characters, and dungeon crawling in the alternate world known as the Metaverse. The cognitive versions of the people met in the city, including the Phantom Thieves of Hearts from the original game, can be summoned for use in the Metaverse through a gacha system.

In mathematics, the Taylor series or Taylor expansion of a function is an infinite sum of terms that are expressed in terms of the function's derivatives at a single point. For most common functions, the function and the sum of its Taylor series are equal near this point. Taylor series are named after Brook Taylor, who introduced them in 1715. A Taylor series is also called a Maclaurin series when 0 is the point where the derivatives are considered, after Colin Maclaurin, who made extensive use of this special case of Taylor series in the 18th century.

The partial sum formed by the first $n + 1$ terms of a Taylor series is a polynomial of degree n that is called the n th Taylor polynomial of the function. Taylor polynomials are approximations of a function, which become generally more accurate as n increases. Taylor's theorem gives quantitative estimates on the error introduced by the use of such approximations. If the Taylor series of a function is convergent, its sum is the limit of the infinite sequence of the Taylor polynomials. A function may differ from the sum of its Taylor series, even if its Taylor series is convergent. A function is analytic at a point x if it is equal to the sum of its Taylor series in some open interval (or open disk in the complex plane) containing x . This implies that the function is analytic at every point of the interval (or disk).

Mac OS X Leopard (version 10.5) is the sixth major release of macOS, Apple's desktop and server operating system for Macintosh computers. Leopard was released on October 26, 2007, as the successor of Mac OS X Tiger, and is available in two editions: a desktop version suitable for personal computers, and a server version, Mac OS X Server. It retailed for \$129 for the desktop version and \$499 for Server. Leopard was superseded by Mac OS X Snow Leopard (version 10.6) in 2009. Mac OS X Leopard is the last version of macOS that supports the PowerPC architecture as its successor, Mac OS X Snow Leopard, functions solely on Intel based Macs.

According to Apple, Leopard contains over 300 changes and enhancements compared to its predecessor, Mac OS X Tiger, covering core operating system components as well as included applications and developer tools. Leopard introduces a significantly revised desktop, with a redesigned Dock, Stacks, a semitransparent menu bar, and an updated Finder that incorporates the Cover Flow visual navigation interface first seen in iTunes. Other notable features include support for writing 64-bit graphical user interface applications, an automated backup utility called Time Machine, support for Spotlight searches across multiple machines, and the inclusion of Front Row and Photo Booth, which were previously included with only some Mac models.

Apple missed Leopard's release time frame as originally announced by Apple's CEO Steve Jobs. When first discussed in June 2005, Jobs had stated that Apple intended to release Leopard at the end of 2006 or early 2007. A year later, this was amended to Spring 2007; however, on April 12, 2007, Apple issued a statement that its release would be delayed until October 2007 because of the development of the iPhone.
