The National Geology and Mining Service (Spanish: Servicio Nacional de Geología y Minería; SERNAGEOMIN) is a Chilean government agency. Its function is to provide geological information and advice, technical assistance to government, public and private interests, and to regulate the mining industry in Chile.

The service was formed in 1980 by the combination of the previous Institute of Geological Investigations and the State Mines Service. Its director is appointed by the President of Chile.

Since 1974, SERNAGEOMIN has published the scientific journal Andean Geology, formerly the Revista Geológica de Chile.

Boletín de Geología

Boletín de Geología Boletín de Geología número 1

1958 Redalyc - Boletín de Geología SciELO - Boletín de Geología Latindex - Boletín de Geología Publindex - Boletín de Geología is a quarterly peer-reviewed open access scientific journal published by the Industrial University of Santander. The journal covers the geosciences, including geology, geophysics, geochemistry, and paleontology. It was established in 1958.

Serra dos Órgãos

Sunrise Pedra da Gávea Sugarloaf Mountain and Urca Hill Natural Monument Geologia – Chico Mendes. Migon 2010, p. 95. Vieira, Salgado & Santos 2015, p. 294

The Serra dos Órgãos ("Organ Range") is a mountain range in the state of Rio de Janeiro, Brazil. It contains the Serra dos Órgãos National Park.

National University of Comahue

The National University of Comahue (Spanish: Universidad Nacional del Comahue, UNC / UNCo / Uncoma) is an Argentine national university in the region of

The National University of Comahue (Spanish: Universidad Nacional del Comahue, UNC / UNCo / Uncoma) is an Argentine national university in the region of Comahue with branches in the provinces of Neuquén, Río Negro and Chubut, with a centre in the city of Neuquén and units in Viedma, Bariloche, San Martín de los Andes, Cipolletti, Zapala, Allen, General Roca, Choele Choel, San Antonio Este, Villa Regina, Esquel, Puerto Madryn and Trelew. It is the largest public university in Argentine Patagonia.

Its university statute (Ordinance # 470/2009) stipulates free admission to all of its programs and ensures freedom of speech for the development of its activities.

As of July 2024 the University has 17 Schools including the School of Languages.

Vargeão Dome

Congresso Brasileiro de Geologia. Vol. 1. Sociedade Brasileira de Geologia. pp. 08–412. Barbour Jr, E.; Corrêa, W.A.G. (1981). "Geologia da Estrutura de Vargão

Vargão Dome is a meteorite crater in Santa Catarina State, Brazil, straddling the municipalities of Vargão, Faxinal dos Guedes, and Passos Maia.

The crater is an almost perfectly circular depression with steep walls, 12 kilometres (7.5 mi) in diameter and up to 225 metres (738 ft) deep, relative to its rim. It is of Early Cretaceous age, or about 123 ± 2 Ma.

The meteorite impacted on the basaltic rocks of the Serra Geral Formation (Jurassic/Cretaceous). The crater displays several concentric rings and radial faults, and an eroded central bulge. The latter consists of impact breccias and sandstones from the Botucatu/Pirambóia Formation (Cretaceous/Triassic), which have been displaced about 700 metres (2,300 ft) above their mean depth in the surrounding area. At least four post-impact lava flows have been identified between the rim and core. The impact origin of the structure is attested by the presence of shatter cones and shocked quartz grains.

Sociedade Brasileira de Geologia

was a Norwegian priest and natural theologian, best known for his book Geologia Norvegica written in Danish in 1657 where he is considered as among the

Mikkel Peders[s]øn Escholt (c. 1600 – 1669) was a Norwegian priest and natural theologian, best known for his book *Geologia Norvegica* written in Danish in 1657 where he is considered as among the first to use the word "geology".

Very little is known about Escholt, except that he was likely from Espholt, Skåne. He studied at Malmö around 1626 and at the University of Copenhagen around 1628. He worked as a chaplain at Akershus Fortress from 1646 and as priest in Våler, Østfold, from 1660. He was married to Karen Henriksdatter of Christiania.

His 1657 book *Geologia Norvegica* is extremely rare; a copy is in Oslo and another in Bergen. Escholt linked earthquakes with volcanoes and used the word "geology" which was also used in an English translation of the book made in 1663 by Daniel Collins. The term "geologia" however was never used except in the title to refer to a kind of science of the earth. Further such usage had been made earlier by Philippus Cluver in a 1619 book *Geologia, de Creatione ed Formatione Globi Terrestris* in Italian. The English writer Robert Lovell also used the word "geology" in his *Pammineralogicon, or, A universal history of mineralls* (1661).

Escholt also published a book of verses dedicated to the priest and theological writer Christen Staphensøn Bang, and a history *Stephanologica Danica* (1648) on Danish kings to commemorate Frederik III as king of Norway.

Catholic University of the North

en Geología Económica. Mención Exploración Magíster en Aplicaciones de Ingeniería Ambiental Programa de Doctorado en Ciencias. Mención Geología Facultad

Catholic University of the North (Spanish: Universidad Católica del Norte (UCN)) is a university in Chile. It is part of the Chilean Traditional Universities. It is located in Antofagasta, Chile. The Catholic University of the North was founded on May 31, 1956.

The current rector is Rodrigo Alda Varas.

Volcanism of Chile

Chile are extinct volcanoes created by hotspots. The Servicio Nacional de Geología y Minería (SERNAGEOMIN) is the statutory agency of the Government of Chile

Volcanism of Chile is a continuous volcanic process that has a strong influence on Chilean landscape, geology, economy and society. Volcanism constantly renews the Chilean landscape with lava flows, lava plateaus, lava domes, cinder cones, stratovolcanoes, shield volcanoes, submarine volcanoes, calderas, diatremes, and maars. Volcanism in Chile as well as in other parts of the world is also associated with multiple natural hazards such as lahars, earthquakes, pyroclastic flows, toxic gases and ash. Continental Chile has a high concentration of active volcanoes due to its location along the Peru–Chile Trench, a subduction zone where the Nazca and Antarctic Plates are driven beneath the South American Plate. Chile has been subject to volcanism since at least late Paleozoic when subduction along the western margin of South America began. Easter Island, Juan Fernández Islands and other oceanic islands of Chile are extinct volcanoes created by hotspots. The Servicio Nacional de Geología y Minería (SERNAGEOMIN) is the statutory agency of the Government of Chile which is responsible for volcano monitoring and hazard assessments. SERNAGEOMIN runs a national Volcano Hazards Program, along with the Observatorio Volcanológico de Los Andes del Sur (OVDAS). The territories of Chile have 92 volcanoes that are considered potentially active, 60 of which have had recorded eruptions in the last 450 years. The volcanoes with most recorded eruptions are:
