

Whose Nose Is That

Jewish nose

The Jewish nose, also known as the Jew's nose and the Middle Eastern nose, is an antisemitic ethnic stereotype referring to a nose with a prominent convex

The Jewish nose, also known as the Jew's nose and the Middle Eastern nose, is an antisemitic ethnic stereotype referring to a nose with a prominent convex bridge, downward nasal tip and relatively broad nostrils. It was singled out as a hostile caricature of Jews in mid-13th century Europe and has since become a defining and persisting element of the overall Jewish stereotype globally. In modern times, it has also been adopted by Jews as a part of their identity to spite historic antisemitism.

Research has found that the nose design outlined by this ethnic stereotype is most prevalent among humans living in the Mediterranean Basin, and that this nose is far less prevalent among modern Jews than popularly supposed.

Among some Jewish communities, such as those in the United States, the so-called "Jewish nose" has come to be effectively "reclaimed" by some Jews as a defining characteristic of their Jewish identity, with general Jewish attitudes toward the trait having changed from mostly negative to mostly positive since the 1950s.

The Nose (Gogol short story)

twist. Written between 1835 and 1836, "The Nose" tells the story of a St. Petersburg official whose nose leaves his face and develops a life of its own

"The Nose" (Russian: ???, romanized: Nos) is an 1836 satirical short story by Nikolai Gogol written during his time living in St. Petersburg. During this time, Gogol's works were primarily focused on the grotesque and absurd, with a romantic twist. Written between 1835 and 1836, "The Nose" tells the story of a St. Petersburg official whose nose leaves his face and develops a life of its own. The story was originally published in *The Contemporary*, a literary journal owned by Alexander Pushkin. The use of a nose as the main source of conflict could have been due to Gogol's own experience with an oddly shaped nose, which was often the subject of self-deprecating jokes in letters. The use of iconic landmarks in the story, as well as its sheer absurdity, has made "The Nose" an important part of St. Petersburg's literary tradition.

"The Nose" is divided into three parts and tells the story of Collegiate Assessor ("Major") Kovalyov, who wakes up one morning without his nose. He later finds out that his nose has developed a life of its own and has apparently surpassed him by attaining the rank of State Councillor. The short story showcases the obsession with social rank that plagued Russia after Peter the Great introduced the Table of Ranks. By allowing commoners to gain hereditary nobility through service to the state, a huge population was given the chance to move up in social status. This opportunity, however, also gave way to large bureaucracies, in which many of Gogol's characters worked.

Nose ring (animal)

A nose ring is inserted into the nose of an animal. Nose rings are used to control bulls and occasionally cows, and to help wean young cattle by preventing

A nose ring is inserted into the nose of an animal. Nose rings are used to control bulls and occasionally cows, and to help wean young cattle by preventing suckling. Nose rings are used on pigs to discourage rooting. Some nose rings are installed through a pierced hole in the nasal septum or rim of the nose and remain there, while others are temporary tools.

Tantia Bhil

article on rhinoplasty in The Lancet presented a Maratha Brahmin patient whose nose was restored after having been cut off by Tantia Bhil shortly before his

Tantia Bhil (or Tanya Bheel, Tanya Mama; 25 January 1840 – 4 December 1889) was a freedom fighter active in India between 1878 and 1889. He is described very negatively as a criminal in the British-era accounts, but is recognized by Indians as a heroic figure. Accounts of both eras have described him as an "Indian Robin Hood".

I've got your nose

I've got your nose is a children's game in which a person pretends to pluck and remove the nose from the face of a toddler by showing an object supposedly

I've got your nose is a children's game in which a person pretends to pluck and remove the nose from the face of a toddler by showing an object supposedly representing the stolen body part. The trick or prank is meant as an illusion, since a person cannot easily observe the status of their own nose.

Otorhinolaryngology

????????????????????? 'otorhinolaryngologist'). ??? (ous), 'ear', whose genitive is ??? (otos) ??? (rhis) 'nose' ????? (larynx) 'larynx' -???? (logia) 'study'

Otorhinolaryngology (oh-toh-RY-noh-LARR-in-GOL-?-jee, abbreviated ORL and also known as otolaryngology, otolaryngology – head and neck surgery (ORL–H&N or OHNS), or ear, nose, and throat (ENT)) is a surgical subspecialty within medicine that deals with the surgical and medical management of conditions of the head and neck. Doctors who specialize in this area are called otorhinolaryngologists, otolaryngologists, head and neck surgeons, or ENT surgeons or physicians.

Patients seek treatment from an otorhinolaryngologist for diseases of the ear, nose, throat, base of the skull, head, and neck. These commonly include functional diseases that affect the senses and activities of eating, drinking, speaking, breathing, swallowing, and hearing. In addition, ENT surgery encompasses the surgical management of cancers and benign tumors and reconstruction of the head and neck as well as plastic surgery of the face, scalp, and neck.

Rhinoplasty

(rhís), meaning "nose", and ????? (plastós), meaning "moulded", commonly called nose job, medically called nasal reconstruction, is a plastic surgery

Rhinoplasty, from Ancient Greek ??? (rhís), meaning "nose", and ????? (plastós), meaning "moulded", commonly called nose job, medically called nasal reconstruction, is a plastic surgery procedure for altering and reconstructing the nose. There are two types of plastic surgery used – reconstructive surgery that restores the form and functions of the nose and cosmetic surgery that changes the appearance of the nose. Reconstructive surgery seeks to resolve nasal injuries caused by various traumas including blunt, and penetrating trauma and trauma caused by blast injury. Reconstructive surgery can also treat birth defects, breathing problems, and failed primary rhinoplasties. Rhinoplasty may remove a bump, narrow nostril width, change the angle between the nose and the mouth, or address injuries, birth defects, or other problems that affect breathing, such as a deviated nasal septum or a sinus condition. Surgery only on the septum is called a septoplasty.

In closed rhinoplasty and open rhinoplasty surgeries – a plastic surgeon, an otolaryngologist (ear, nose, and throat specialist), or an oral and maxillofacial surgeon (jaw, face, and neck specialist), creates a functional, aesthetic, and facially proportionate nose by separating the nasal skin and the soft tissues from the nasal framework, altering them as required for form and function, suturing the incisions, using tissue glue and applying either a package or a stent, or both, to immobilize the altered nose to ensure the proper healing of the surgical incision.

Persian cat

The Persian cat, also known as the Persian Longhair or simply Persian, is a long-haired traditional breed of cat characterised by a round face and petite, but not flat and not smashed in, muzzle. The short flat nose was created in the US from in-breeding and causes breathing difficulties in the breed, whereas, the traditional Persian breed has a petite nose which enables them to breathe without difficulties.

The first documented ancestors of Persian cats might have been imported into Italy from Khorasan as early as around 1620, but this has not been proven. Instead, there is stronger evidence for a longhaired cat breed being exported from Afghanistan and Iran/Persia from the 19th century onwards. Persian cats have been widely recognised by the North-West European cat fancy since the 19th century, and after World War II by breeders from North America, Australia and New Zealand. Some cat fancier organisations' breed standards subsume the Himalayan and Exotic Shorthair as variants of this breed, while others generally treat them as separate breeds.

The selective breeding carried out by breeders has allowed the development of a wide variety of coat colours, but has also led to the creation of increasingly flat-faced Persian cats. Favoured by fanciers, this head structure can bring with it several health problems. As is the case with the Siamese breed, there have been efforts by some breeders to preserve the older type of cat, the Traditional Persian, which has a more pronounced muzzle. Hereditary polycystic kidney disease (PKD) is prevalent in the breed, affecting almost half of the population in some countries.

In 2021, Persian cats were ranked as the fourth-most popular cat breed in the world according to the Cat Fanciers' Association, an American international cat registry.

Traditional Persian

the short nose and clear break became shorter and higher. This resulted in the modification of the original Persian breed standard so that modern show

Traditional Persian is one of several names for a group of cats that are considered to be essentially the original breed of Persian cat, before the variety was selectively bred to have extreme features. Other everyday usage names are: Doll Face Persian, Classic Persian, Old Fashioned Persian, Long-nosed Persian, Old-style Longhair, Traditional Longhair and Original Longhair.

The physical appearance of this domestic cat breed barely changed when compared to photos dating back to the late 1800s. However, since some breeders in the United States and other parts of the world introduced the brachycephalic mutation into the breed, the short nose and clear break became shorter and higher. This resulted in the modification of the original Persian breed standard so that modern show quality Persians must have pushed-in faces. This resulted in the breed disappearing from cat shows.

However, this older form of Persian cat was made iconic to the general public through its use in popular films, even as it was being phased out in the cat fancy. For example, the Traditional Persian has been featured in eight of the James Bond movies, beginning with "From Russia with Love" in 1963. It was also featured in

the kung fu cult classic Enter the Dragon.

List of U.S. aircraft near-miss incidents since 2023

nearly hit a Frontier Airlines plane whose nose had intruded onto the runway, each only missing by a small margin that an internal FAA report called "skin to skin"

With seven runway incursions of United States commercial aircraft during January and February, the first two months of 2023 saw the highest rate of such incidents in five years. 2018 to 2022 combined had 23 comparable incidents, 5 of which occurred in 2022. The events prompted a review by the Federal Aviation Administration, announced by acting administrator Billy Nolen on February 28, 2023. The review started on March 15. For the first time in 14 years, U.S. aviation industry leaders met the same day at a safety summit.

An August 2023 report in The New York Times found that 46 close calls had occurred involving commercial airliners in the previous month. In one instance, two consecutive aircraft taking off from San Francisco International Airport nearly hit a Frontier Airlines plane whose nose had intruded onto the runway, each only missing by a small margin that an internal FAA report called "skin to skin". The New York Times investigation attributed the increase in incidents in large part to a shortage in air traffic controller staffing, with overworked controllers making more errors.

On January 29, 2025, approximately two years after these incidents became a more frequent issue, the deadliest commercial aviation disaster in more than a decade occurred between an American Airlines jet and a military helicopter.
