9mm P.A. (Pistole Automatik, German for "automatic pistol"), 9×22mm or 9mm P.A.K. (Pistole Automatik Knall, "automatic blank pistol") is a firearm cartridge for a non-lethal gas pistol noisemaking gun. Caliber 9mm P.A. includes various blank, gas or rubber ammunitions made for different use.

9mm P.A. Blank has also been used for theatrical purposes, including as a modification to muzzle-loading firearms, allowing early-modern muskets and the like to be fired on-stage without the actors learning the complex steps of loading with loose powder.

Valsartan

original on 25 October 2021. Retrieved 24 October 2021. "Diovan valsartan 160mg film-coated tablet blister pack". Therapeutic Goods Administration (TGA)

Valsartan, sold under the brand name Diovan among others, is a medication used to treat high blood pressure, heart failure, and diabetic kidney disease. It is an angiotensin II receptor blocker (ARB). It is a reasonable initial treatment for high blood pressure. It is taken by mouth.

Common side effects include feeling tired, dizziness, high blood potassium, diarrhea, and joint pain. Other serious side effects may include kidney problems, low blood pressure, and angioedema. Use in pregnancy may harm the baby and use when breastfeeding is not recommended. It is an angiotensin II receptor antagonist and works by blocking the effects of angiotensin II.

Valsartan was patented in 1990, and came into medical use in 1996. It is available as a generic medication. In 2023, it was the 85th most commonly prescribed medication in the United States, with more than 7 million prescriptions.

Random glucose test

doctor or a clinic for additional tests however as a random glucose of > 160mg/dl does not necessarily mean you are diabetic).[citation needed] Blood glucose

A random glucose test, also known as a random blood glucose test (RBG test) or a casual blood glucose test (CBG test) is a glucose test (test of blood sugar level) on the blood of a non-fasting person. This test assumes a recent meal and therefore has higher reference values than the fasting blood glucose (FBG) test.

Most mentions of capillary blood glucose (CBG) tests refer to random, nonfasting instances thereof, but the real distinction in that term is capillary blood glucose versus venous blood glucose, arterial blood glucose, or interstitial fluid glucose; any fingerstick or optical transdermal glucose test, fasting or nonfasting, measures capillary blood glucose level.
