

**F**

## F

events. *F* with diacritics: ʔ f ʔ ʔ ʔ ʔ ʔ : *F* with stroke is used in the Anthropos phonetic transcription system and older Ewe writing ʔ : Lenis *F* is used

**F** , or **f** , is the sixth letter of the Latin alphabet and many modern alphabets influenced by it, including the modern English alphabet and the alphabets of all other modern western European languages. Its name in English is *ef* (pronounced ), and the plural is *efs*.

## Fourier transform

$$f = f^{RE} + f^{RO} + i f^{IE} + i f^{IO} \quad ? F ? F \quad ? F \quad ? F \quad ? F \quad F r e q u e n c y \quad d o m a i n \quad f^{\wedge} = f^{\wedge} RE + i f^{\wedge} IO + i f^{\wedge} IE + f^{\wedge}$$

In mathematics, the Fourier transform (FT) is an integral transform that takes a function as input then outputs another function that describes the extent to which various frequencies are present in the original function. The output of the transform is a complex-valued function of frequency. The term Fourier transform refers to both this complex-valued function and the mathematical operation. When a distinction needs to be made, the output of the operation is sometimes called the frequency domain representation of the original function. The Fourier transform is analogous to decomposing the sound of a musical chord into the intensities of its constituent pitches.

Functions that are localized in the time domain have Fourier transforms that are spread out across the frequency domain and vice versa, a phenomenon known as the uncertainty principle. The critical case for this principle is the Gaussian function, of substantial importance in probability theory and statistics as well as in the study of physical phenomena exhibiting normal distribution (e.g., diffusion). The Fourier transform of a Gaussian function is another Gaussian function. Joseph Fourier introduced sine and cosine transforms (which correspond to the imaginary and real components of the modern Fourier transform) in his study of heat transfer, where Gaussian functions appear as solutions of the heat equation.

The Fourier transform can be formally defined as an improper Riemann integral, making it an integral transform, although this definition is not suitable for many applications requiring a more sophisticated integration theory. For example, many relatively simple applications use the Dirac delta function, which can be treated formally as if it were a function, but the justification requires a mathematically more sophisticated viewpoint.

The Fourier transform can also be generalized to functions of several variables on Euclidean space, sending a function of 3-dimensional "position space" to a function of 3-dimensional momentum (or a function of space and time to a function of 4-momentum). This idea makes the spatial Fourier transform very natural in the study of waves, as well as in quantum mechanics, where it is important to be able to represent wave solutions as functions of either position or momentum and sometimes both. In general, functions to which Fourier methods are applicable are complex-valued, and possibly vector-valued. Still further generalization is possible to functions on groups, which, besides the original Fourier transform on  $\mathbb{R}$  or  $\mathbb{R}^n$ , notably includes the discrete-time Fourier transform (DTFT, group =  $\mathbb{Z}$ ), the discrete Fourier transform (DFT, group =  $\mathbb{Z} \bmod N$ ) and the Fourier series or circular Fourier transform (group =  $S^1$ , the unit circle or closed finite interval with endpoints identified). The latter is routinely employed to handle periodic functions. The fast Fourier transform (FFT) is an algorithm for computing the DFT.

## Fraktur

p

k

$$p^{\{k\}}$$

. All finite fields of a given order are isomorphic.

Finite fields are fundamental in a number of areas of mathematics and computer science, including number theory, algebraic geometry, Galois theory, finite geometry, cryptography and coding theory.

### Phonetic Extensions Supplement

? U+1DAx ? ? ? ? ? ? ? ? ? ? ? ? ? ? ? ? U+1DBx

Phonetic Extensions Supplement is a Unicode block containing characters for specialized and deprecated forms of the International Phonetic Alphabet.

### Enclosed Alphanumerics

? ? ? ? ? U+24Bx ? ? ? ? ? ? ? ? ? ? ? ? ? ? U+24Cx ? ? ? ? ? ? ? ? ? ? ? ? ? ? U+24Dx ? ? ? ? ?  
? ? ? ? ? ? ? ? ? ? U+24Ex ? ? ? ? ? ? ? ?

Enclosed Alphanumerics is a Unicode block of typographical symbols of an alphanumeric within a circle, a bracket or other not-closed enclosure, or ending in a full stop.

It is currently fully allocated. Within the Basic Multilingual Plane, a few additional enclosed numerals are in the Dingbats and the Enclosed CJK Letters and Months blocks. There is also a block with more of these characters in the Supplementary Multilingual Plane named Enclosed Alphanumeric Supplement (U+1F100–U+1F1FF), as of Unicode 6.0.

### Enclosed Alphanumeric Supplement

*Official Unicode Consortium code chart (PDF)* 0 1 2 3 4 5 6 7 8 9 A B C D E F U+1F10x ? ? ? ? ? ? ? ?  
? ? ? ? ? ? ? ? U+1F11x ? ? ? ?

Enclosed Alphanumeric Supplement is a Unicode block consisting of Latin alphabet characters and Arabic numerals enclosed in circles, ovals or boxes, used for a variety of purposes. It is encoded in the range U+1F100–U+1F1FF in the Supplementary Multilingual Plane.

The block is mostly an extension of the Enclosed Alphanumerics block, containing further enclosed alphanumeric characters which are not included in that block or Enclosed CJK Letters and Months. Most of the characters are single alphanumerics in boxes or circles, or with trailing commas. Two of the symbols are identified as dingbats. A number of multiple-letter enclosed abbreviations are also included, mostly to provide compatibility with Broadcast Markup Language standards (see ARIB STD B24 character set) and Japanese telecommunications networks' emoji sets. The block also includes the regional indicator symbols to be used for emoji country flag support.

F. F. Worthington

*Worthy's command away from him (Ref: "Worthy";: A Biography of Major-General F.F. Worthington CB, MC, MM by Larry Worthington). In 1944 he returned to Canada*

Major-General Frederic Franklin Worthington MC, MM, CD (September 17, 1889 – December 8, 1967), nicknamed "Worthy" and "Fighting Frank", was a senior Canadian Army officer. He is considered the father of the Royal Canadian Armoured Corps.

F. F. Bruce

*called the "Dean of Evangelical Scholarship"; I. Howard Marshall remembered F. F. Bruce "first of all for his highly distinguished academic career as a university*

Frederick Fyvie Bruce (12 October 1910 – 11 September 1990) was a Scottish evangelical scholar, author and educator who was Rylands Professor of Biblical Criticism and Exegesis at the University of Manchester from 1959 until 1978 and one of the most influential evangelical scholars of the second half of the twentieth century. When the academic community looked down upon Evangelicals, Bruce demonstrated that a scholar holding evangelical views could do worthwhile academic work. He persuaded Evangelicals that they should not turn their backs on academic methods of Bible study, even if the results might differ from traditional evangelical views. As a result, he has been called the "Dean of Evangelical Scholarship".

I. Howard Marshall remembered F. F. Bruce "first of all for his highly distinguished academic career as a university teacher and a prolific writer who did more than anybody else in this [the 20th] century to develop and encourage conservative evangelical scholarship. Possessed of outstanding intellectual ability, a phenomenal memory, encyclopedic knowledge, a colossal capacity for work, and a limpid style, he produced a remarkable output of books and essays that will continue to be read for years to come, and he trained directly or indirectly many younger scholars now working in all parts of the world."

"The issues which, for Bruce, were non-negotiable," said his biographer Tim Grass, "may be summarized as the reliability of the New Testament, the person and work of Christ, the Christian life as one of forgiveness and liberty as befits those who are being led by the Spirit, and the right and duty of every believer to use whatever gifts God has given them."

F. F. Bruce was charitable, gentle, and respected those with whom he disagreed and those who disagreed with him. He seemed to be genuinely humble, teachable, and diplomatic. J. I. Packer said, "No Christian was ever more free of narrow bigotry, prejudice and eccentricity in the views he held and the way he held them; no man did more to demonstrate how evangelical faith and total academic integrity may walk hand in hand."

## Lockheed Martin F-35 Lightning II

*The Lockheed Martin F-35 Lightning II is an American family of single-seat, single-engine, supersonic stealth strike fighters. A multirole combat aircraft*

The Lockheed Martin F-35 Lightning II is an American family of single-seat, single-engine, supersonic stealth strike fighters. A multirole combat aircraft designed for both air superiority and strike missions, it also has electronic warfare and intelligence, surveillance, and reconnaissance capabilities. Lockheed Martin is the prime F-35 contractor with principal partners Northrop Grumman and BAE Systems. The aircraft has three main variants: the conventional takeoff and landing (CTOL) F-35A, the short take-off and vertical-landing (STOVL) F-35B, and the carrier variant (CV) catapult-assisted take-off but arrested recovery (CATOBAR) F-35C.

The aircraft descends from the Lockheed Martin X-35, which in 2001 beat the Boeing X-32 to win the Joint Strike Fighter (JSF) program intended to replace the F-16 Fighting Falcon, F/A-18 Hornet, and the McDonnell Douglas AV-8B Harrier II "jump jet", among others. Its development is principally funded by the United States, with additional funding from program partner countries from the North Atlantic Treaty Organization (NATO) and close U.S. allies, including Australia, Canada, Denmark, Italy, the Netherlands, Norway, the United Kingdom, and formerly Turkey. Several other countries have also ordered, or are considering ordering, the aircraft. The program has drawn criticism for its unprecedented size, complexity,

ballooning costs, and delayed deliveries. The acquisition strategy of concurrent production of the aircraft while it was still in development and testing led to expensive design changes and retrofits. As of July 2024, the average flyaway costs per plane are: US\$82.5 million for the F-35A, \$109 million for the F-35B, and \$102.1 million for the F-35C.

The F-35 first flew in 2006 and entered service with the U.S. Marine Corps F-35B in July 2015, followed by the U.S. Air Force F-35A in August 2016 and the U.S. Navy F-35C in February 2019. The aircraft was first used by the Israeli Air Force's 2018 strikes in Syria. F-35 variants have seen subsequent combat use by Israel in Iraq, Gaza, Lebanon, Yemen, and Iran; by the US in Afghanistan, Iraq, Yemen, and Iran; and by the UK in Iraq and Syria. F-35As contribute to US nuclear forward deployment in European NATO countries. The U.S. plans to buy 2,456 F-35s through 2044, which will represent the bulk of the crewed tactical aviation of the U.S. Air Force, Navy, and Marine Corps for several decades; the aircraft is planned to be a cornerstone of NATO and U.S.-allied air power and to operate to 2070.
