

8 Litre En Ml

Club-Mate

per 100 ml, sugar content of 5 g per 100 ml, and 20 kcal per 100 ml, which is lower than most energy drinks. Club-Mate is available in 0.33-litre and 0

Club-Mate (German pronunciation: [ˈklʰp ˈmaːtʰ]) is a caffeinated carbonated mate-extract beverage made by the Loscher Brewery (Brauerei Loscher) in Münchsteinach, Germany, which originated in 1924. Club-Mate has 20 mg of caffeine per 100 ml, sugar content of 5 g per 100 ml, and 20 kcal per 100 ml, which is lower than most energy drinks. Club-Mate is available in 0.33-litre and 0.5-litre bottles.

Some Club-Mate bottles include the slogan "man gewöhnt sich daran", which roughly translates as "you'll get used to it".

Examples of Club-Mate-based mixed drinks are: vodka-mate; Tschunk, a combination of rum and Club-Mate; Jaeger-Mate, a mix of Jägermeister and Club-Mate; and the Joey special, a mix of Whiskey and Club-Mate.

Perrier

Perrier is available in 750 ml, 330 ml, and 200 ml glass bottles in Europe, as well as in 330 ml cans. In other markets, the 250 ml can is also available.

Perrier (PERR-ee-ay, also US: -ˈAY; French: [pʁiˈʒe]) is a French brand of bottled water marketed as coming from its source in Vergèze, located in the Gard department. Perrier was part of the Perrier Vittel Group SA, which became Nestlé Waters France after the acquisition of the company by Nestlé in 1992.

Volume

the litre (L) as a unit of volume, where 1 L = 1 dm³ = 1000 cm³ = 0.001 m³. For the litre unit, the commonly used prefixes are the millilitre (mL), centilitre

Volume is a measure of regions in three-dimensional space. It is often quantified numerically using SI derived units (such as the cubic metre and litre) or by various imperial or US customary units (such as the gallon, quart, cubic inch). The definition of length and height (cubed) is interrelated with volume. The volume of a container is generally understood to be the capacity of the container; i.e., the amount of fluid (gas or liquid) that the container could hold, rather than the amount of space the container itself displaces.

By metonymy, the term "volume" sometimes is used to refer to the corresponding region (e.g., bounding volume).

In ancient times, volume was measured using similar-shaped natural containers. Later on, standardized containers were used. Some simple three-dimensional shapes can have their volume easily calculated using arithmetic formulas. Volumes of more complicated shapes can be calculated with integral calculus if a formula exists for the shape's boundary. Zero-, one- and two-dimensional objects have no volume; in four and higher dimensions, an analogous concept to the normal volume is the hypervolume.

Mercedes-Benz G-Class

mirrors as the GL-Class and ML-Class models. The AMG version received a new front bumper with three large air intakes. The 5.4-litre supercharged V8 [with 722

The Mercedes-Benz G-Class, colloquially known as the G-Wagon or G-Wagen (as an abbreviation of Geländewagen), is a four-wheel drive luxury SUV sold by Mercedes-Benz. Originally developed as a military off-roader, later more luxurious models were added to the line. In certain markets, it was sold under the Puch name as Puch G until 2000.

The G-Wagen is characterised by its boxy styling and body-on-frame construction. It uses three fully locking differentials, one of the few passenger car vehicles to have such a feature. Despite the introduction of an intended replacement, the unibody SUV Mercedes-Benz GL-Class in 2006, the G-Class is still in production and is one of the longest-produced vehicles in Daimler's history, with a span of 45 years. Only the Unimog surpasses it. In 2018, Mercedes-Benz introduced the second-generation W463 with heavily revised chassis, powertrain, body, and interior. In 2023, Mercedes-Benz announced plans to launch a smaller version of the G-Class, named "little G"—though no definitive date was given for the launch.

The 400,000th unit was built on 4 December 2020. The success of the second-generation W463 led to the 500,000th unit milestone three years later in April 2023. The 500,000th model was a special one-off model with agave green paintwork, black front end, and amber turn signal indicators in tribute to the iconic 1979 press release photo of a jumping W460 240 GD.

Porsche Cayenne

seconds. A Turbo S version was built in 2006 to compete with the Mercedes-Benz ML 63 AMG. The Cayenne Turbo and Turbo S include a low-range case, a locking

The Porsche Cayenne is a series of automobiles manufactured by the German company Porsche since 2002. It is a luxury crossover SUV, and has been described as both a full-sized and a mid-sized vehicle. The first generation was known within Porsche as the Type 9PA (955/957) or E1. It was the first V8-engined vehicle built by Porsche since 1995, when the Porsche 928 was discontinued. It is also Porsche's first off-road variant vehicle since its Super and Junior tractors of the 1950s, as well as the first production Porsche with four doors. Since 2014, the Cayenne has been sold alongside a smaller Porsche SUV, the Macan.

The second-generation Cayenne (Type 92A or E2) was unveiled at the 2010 Geneva Motor Show in March. The Cayenne shares its platform, body frame, doors, and electronics with the Volkswagen Touareg and Audi Q7. It received a facelift in 2014 with minor external changes, and introduced a new plug-in E-Hybrid version with its public launch at the Paris Motor Show. Since 2008, all engines have featured direct injection technology. The third generation (Type 9YA or E3) was unveiled in 2017 in the German city of Stuttgart.

Peugeot 508

for the market in Europe with its HDI common rail diesel engines. The 1.6-litre HDI 112 can be fitted with the e HDI 'micro hybrid' system, including an

The Peugeot 508 is a mid-size/large family car produced by the French automaker Peugeot since 2010, and followed by the 508 SW, an estate version, in 2011. Since 2012, the 508 has been the flagship model by Peugeot, slotted above the 208 and 308 in size.

The 508 serves as the successor to both the 407 and 607 model lines, replacing both vehicles under a single nameplate for which no direct replacement was scheduled. It shares its platform and most engine options with the second generation Citroën C5: the two cars are produced alongside one another at the company's Rennes Plant, and in Wuhan, China, for sales inside China.

Percutaneous transhepatic cholangiography

contrast medium is used in this procedure with concentration of 150 mg/ml with 20 to 60 ml volume. Those who undergoes the procedure needs to be fasted for

Percutaneous transhepatic cholangiography, percutaneous hepatic cholangiogram (PTHC) is a radiological technique used to visualize the anatomy of the biliary tract. A contrast medium is injected into a bile duct in the liver, after which X-rays are taken. It allows access to the biliary tree in cases where endoscopic retrograde cholangiopancreatography has been unsuccessful. Initially reported in 1937, the procedure became popular in 1952.

Karlsbad-style coffee maker

Over the years it was available in various sizes ranging from 250 ml to 2.25 litre. In 2007, the so-called Bayreuth coffee makers were created by designer

A variant of the category of French drip coffee pots is the group of so-called Bohemian coffee pots, manual zero-bypass flat bottom coffee makers made out of porcelain only, including Karlsbad coffee makers (1878), Bayreuth coffee makers (2007), the Walküre cup filter (2010) and the Walküre aroma-pot (2015). In contrast to French drip coffee pots, they all use a special double-layered conically cross-slitted strainer made from through-glazed porcelain as well as a water spreader with six (or, in the larger models, more) large round holes to ensure an even water distribution and reduce the agitation of the coffee bed, a method sometimes also called cake filtration. In particular before World War I, but still up to the advent of the Espresso machine in the 1950s, they were very popular in the Viennese coffee house culture. The special kind of drip coffee they produce is called a Karlsbader ('Karlsbad coffee'). In Vienna, the Kleiner Schwarzer (confusingly also called Mokka or Piccolo), a black coffee without milk or sugar, was often prepared in Karlsbad coffee makers as well, hence they were sometimes incorrectly also called Vienna coffee-making machines. Once manufactured by many porcelain manufacturers, demand gradually dropped and eventually production stopped when electrical coffee makers became more and more common, so that Karlsbad coffee makers were only available on the used market for a couple of decades. However, experiencing a renaissance since about the millennium as part of the so-called third-wave of coffee one manufacturer restarted production of them. They are also used in restaurants and by connoisseurs, coffee sommeliers, coffee roasters and in coffee tasting laboratories.

St Nazaire Raid

disabled before reaching the mole. ML 192 and ML 262 were set on fire, and all but six of their men were killed. ML 268 was blown up, with one survivor

The St Nazaire Raid or Operation Chariot was a British amphibious attack on the heavily defended Normandie dry dock at St Nazaire in German-occupied France during the Second World War. The operation was undertaken by the Royal Navy (RN) and British Commandos under the auspices of Combined Operations Headquarters on 28 March 1942.

St Nazaire was targeted because the loss of its dry dock would force Germany's largest battleship, Tirpitz, to return to home waters if she were damaged. This would expose her to attack by British forces including the Home Fleet in the English Channel or the North Sea.

The obsolete destroyer HMS Campbeltown, accompanied by 18 smaller craft, crossed the English Channel to the Atlantic coast of France and rammed into the Normandie dry dock south gate. The ship had been packed with delayed-action explosives, well hidden within a steel and concrete case, that detonated later that day, putting the dock out of service until 1948.

A force of commandos landed to destroy machinery and other structures. German gunfire sank, set ablaze, or immobilized virtually all the small craft intended to transport the commandos back to England. The commandos fought their way through the town to escape overland but many surrendered when they ran out of ammunition or were surrounded by the Wehrmacht defending Saint-Nazaire.

Of the 612 men who undertook the raid, 228 returned to Britain, 169 were killed and 215 became prisoners of war. German casualties included over 360 dead, some of whom were killed after the raid when Campbeltown exploded. To recognise their bravery, 89 members of the raiding party were awarded decorations, including five Victoria Crosses. After the war, St Nazaire was one of 38 battle honours awarded to the commandos. The operation has been called "the greatest raid of all" in British military circles.

Density

to the following equivalent metric units: gram per millilitre (g/mL) kilogram per litre (kg/L) tonne per cubic metre (t/m³) In US customary units density

Density (volumetric mass density or specific mass) is the ratio of a substance's mass to its volume. The symbol most often used for density is ρ (the lower case Greek letter rho), although the Latin letter D (or d) can also be used:

ρ

=

m

V

,

$$\rho = \frac{m}{V}$$

where ρ is the density, m is the mass, and V is the volume. In some cases (for instance, in the United States oil and gas industry), density is loosely defined as its weight per unit volume, although this is scientifically inaccurate – this quantity is more specifically called specific weight.

For a pure substance, the density is equal to its mass concentration.

Different materials usually have different densities, and density may be relevant to buoyancy, purity and packaging. Osmium is the densest known element at standard conditions for temperature and pressure.

To simplify comparisons of density across different systems of units, it is sometimes replaced by the dimensionless quantity "relative density" or "specific gravity", i.e. the ratio of the density of the material to that of a standard material, usually water. Thus a relative density less than one relative to water means that the substance floats in water.

The density of a material varies with temperature and pressure. This variation is typically small for solids and liquids but much greater for gases. Increasing the pressure on an object decreases the volume of the object and thus increases its density. Increasing the temperature of a substance while maintaining a constant pressure decreases its density by increasing its volume (with a few exceptions). In most fluids, heating the bottom of the fluid results in convection due to the decrease in the density of the heated fluid, which causes it to rise relative to denser unheated material.

The reciprocal of the density of a substance is occasionally called its specific volume, a term sometimes used in thermodynamics. Density is an intensive property in that increasing the amount of a substance does not increase its density; rather it increases its mass.

Other conceptually comparable quantities or ratios include specific density, relative density (specific gravity), and specific weight.
