This Is this Is One Way That They'Re Using Big Data To Extrapolate from Things That Have in the Past Being True over a Population To Make Predictions about Individuals about the Future and this Is Where I Think It's Very Problematic because You'Re Making Two Assumptions You'Re Assuming that What Applies to a Population Is a Good Guide to What an Individual Will Do in the Future and You'Re Assuming that the Future Will Look like the Past and in some Cases We Don't Want It To Look like the Past

What are Parameters in Large Language Model? - What are Parameters in Large Language Model? 6 minutes, 29 seconds - What are the Parameters in the **Large**, Language Model? 00:26 Parameters in **large**, language models like GPT-3 are variables ...

Parameters in large language models like GPT-3 are variables learned during training to minimize the difference between predicted and actual output.

Parameters include both weights and biases in neural networks, which help adjust and optimize the model during training.

Parameters in neural networks are calculated by multiplying inputs by outputs, considering both weights and biases.

Large language models like GPT-3 have billions of parameters, indicating their complexity with numerous layers, nodes, and connections.
