## Tusi (drug)

*according to the UN Office on Drugs and Crime, contained no 2C-B in most instances as of 2022. It may have been named this way because the drug has effects*

Tusi (also written as tussi, tuci, or tucibi) is a recreational drug that contains a mixture of different psychoactive substances, most commonly found in a pink-dyed powder known as pink cocaine. It is believed to have originated in Latin America, specifically Colombia around 2018. Ketamine and MDMA are the most common ingredients, although cocaine, methamphetamine, oxycodone, caffeine, cathinones, and other designer drugs are found as well. There are no standard proportions of the constituent drugs.

The inclusion of pink colorants is an element that seeks to attract consumers, especially young people, by offering a striking visual aspect that resembles something "attractive" or "festive."

Though the name "tusi" is phonetically similar to "2C", tusi is not the same psychoactive substance as 2C-B or more broadly, the 2C family. Tusi, according to the UN Office on Drugs and Crime, contained no 2C-B in most instances as of 2022. It may have been named this way because the drug has effects crudely similar to the psychedelic 2C-B.

## Lean (drug)

*combination with alcohol and/or other drugs. When taken in prescribed quantities, codeine-promethazine is quite safe, but dangers arise in higher doses since promethazine*

Lean or purple drank (known by numerous local and street names) is a polysubstance drink used as a recreational drug. It is prepared by mixing prescription-grade cough or cold syrup containing an opioid drug and an anti-histamine drug with a soft drink and sometimes hard candy. The beverage originated in Houston as early as the 1960s and is popular in hip hop culture, especially within the Southern United States. Codeine/promethazine syrup is usually used to make lean, but other syrups are also used.

Users of lean are at risk of addiction, and serious complications include respiratory depression, respiratory arrest, and cardiac arrest. Lean is especially dangerous when consumed with alcohol.

## Substance abuse

*legislation to criminalize certain types of drug use. These drugs are often called "illegal drugs" but generally what is illegal is their unlicensed production*

Substance misuse, also known as drug misuse or, in older vernacular, substance abuse, is the use of a drug in amounts or by methods that are harmful to the individual or others. It is a form of substance-related disorder, differing definitions of drug misuse are used in public health, medical, and criminal justice contexts. In some cases, criminal or anti-social behavior occurs when some persons are under the influence of a drug, and may result in long-term personality changes in individuals. In addition to possible physical, social, and psychological harm, the use of some drugs may also lead to criminal penalties, although these vary widely depending on the local jurisdiction.

Drugs most often associated with this term include alcohol, amphetamines, barbiturates, benzodiazepines, cannabis, cocaine, hallucinogens, methaqualone, and opioids. The exact cause of substance abuse is sometimes clear, but there are two predominant theories: either a genetic predisposition or most times a habit learned or passed down from others, which, if addiction develops, manifests itself as a possible chronic debilitating disease. It is not easy to determine why a person misuses drugs, as there are multiple environmental factors to consider. These factors include not only inherited biological influences (genes), but there are also mental health stressors such as overall quality of life, physical or mental abuse, luck and circumstance in life and early exposure to drugs that all play a huge factor in how people will respond to drug use.

In 2010, about 5% of adults (230 million) used an illicit substance. Of these, 27 million have high-risk drug use—otherwise known as recurrent drug use—causing harm to their health, causing psychological problems, and or causing social problems that put them at risk of those dangers. In 2015, substance use disorders resulted in 307,400 deaths, up from 165,000 deaths in 1990. Of these, the highest numbers are from alcohol use disorders at 137,500, opioid use disorders at 122,100 deaths, amphetamine use disorders at 12,200 deaths, and cocaine use disorders at 11,100.

100,000,000 Guinea Pigs: Dangers in Everyday Foods, Drugs, and Cosmetics is a book written by Arthur Kallet and F. J. Schlink first released in 1933 by the Vanguard Press and manufactured in the United States of America. Its central argument propounds that the American population is being used as guinea pigs in a giant experiment undertaken by the American producers of food stuffs and patent medicines and the like. Kallet and Schlink premise the book as being "written in the interest of the consumer, who does not yet realize that he is being used as a guinea pig..."

War on drugs

*than drugs. So as itinerant workers and urban African Americans became another visible group of drug users, the laws grew harsher. "War on Drugs";. History*

The war on drugs, sometimes referred to in the 21st century as the war on cartels in contexts of military intervention and counterterrorism, is a global anti-narcotics campaign led by the United States federal government, including drug prohibition and foreign assistance, with the aim of reducing the illegal drug trade in the US. The initiative's efforts includes policies intended to discourage the production, distribution, and consumption of psychoactive drugs that the participating governments, through United Nations treaties, have made illegal.

The term "war on drugs" was popularized by the media after a press conference, given on June 17, 1971, during which President Richard Nixon declared drug abuse "public enemy number one". Earlier that day, Nixon had presented a special message to the US Congress on "Drug Abuse Prevention and Control", which included text about devoting more federal resources to the "prevention of new addicts, and the rehabilitation of those who are addicted"; that aspect did not receive the same media attention as the term "war on drugs".

In the years since, presidential administrations and Congress have generally maintained or expanded Nixon's original initiatives, with the emphasis on law enforcement and interdiction over public health and treatment. Cannabis presents a special case; it came under federal restriction in the 1930s, and since 1970 has been classified as having a high potential for abuse and no medical value, with the same level of prohibition as heroin. Multiple mainstream studies and findings since the 1930s have recommended against such a severe classification. Beginning in the 1990s, cannabis has been legalized for medical use in 39 states, and also for recreational use in 24, creating a policy gap with federal law and non-compliance with the UN drug treaties.

In June 2011, the Global Commission on Drug Policy released a critical report, declaring: "The global war on drugs has failed, with devastating consequences for individuals and societies around the world." In 2023, the UN High Commissioner for Human Rights stated that "decades of punitive, 'war on drugs' strategies had failed to prevent an increasing range and quantity of substances from being produced and consumed." That year, the annual US federal drug war budget reached \$39 billion, with cumulative spending since 1971 estimated at \$1 trillion.

## Recreational drug use

Recreational drug use is the use of one or more psychoactive drugs to induce an altered state of consciousness, either for pleasure or for some other casual purpose or pastime. When a psychoactive drug enters the user's body, it induces an intoxicating effect. Recreational drugs are commonly divided into three categories: depressants (drugs that induce a feeling of relaxation and calmness), stimulants (drugs that induce a sense of energy and alertness), and hallucinogens (drugs that induce perceptual distortions such as hallucination).

In popular practice, recreational drug use is generally tolerated as a social behaviour, rather than perceived as the medical condition of self-medication. However, drug use and drug addiction are severely stigmatized everywhere in the world. Many people also use prescribed and controlled depressants such as opioids, opiates, and benzodiazepines. What controlled substances are considered generally unlawful to possess varies by country, but usually includes cannabis, cocaine, opioids, MDMA, amphetamine, methamphetamine, psychedelics, benzodiazepines, and barbiturates. As of 2015, it is estimated that about 5% of people worldwide aged 15 to 65 (158 million to 351 million) had used controlled drugs at least once.

Common recreational drugs include caffeine, commonly found in coffee, tea, soft drinks, and chocolate; alcohol, commonly found in beer, wine, cocktails, and distilled spirits; nicotine, commonly found in tobacco, tobacco-based products, and electronic cigarettes; cannabis and hashish (with legality of possession varying inter/intra-nationally); and the controlled substances listed as controlled drugs in the Single Convention on Narcotic Drugs (1961) and the Convention on Psychotropic Substances (1971) of the United Nations (UN). Since the early 2000s, the European Union (EU) has developed several comprehensive and multidisciplinary strategies as part of its drug policy in order to prevent the diffusion of recreational drug use and abuse among the European population and raise public awareness on the adverse effects of drugs among all member states of the European Union, as well as conjoined efforts with European law enforcement agencies, such as Europol and EMCDDA, in order to counter organized crime and illegal drug trade in Europe.

## Urban legends about drugs

*oppose all classified drug use, often causing the true effects and dangers of drugs to be misunderstood and less scrutinized. The most common subjects*

Many urban legends and misconceptions about drugs have been created and circulated among young people and the general public, with varying degrees of veracity. These are commonly repeated by organizations which oppose all classified drug use, often causing the true effects and dangers of drugs to be misunderstood

and less scrutinized. The most common subjects of such false beliefs are LSD, cannabis, and PCP. These misconceptions include misinformation about adulterants or other black market issues, as well as alleged effects of the pure substances.

## Food and Drug Administration

*The Center for Drug Evaluation and Research uses different requirements for the three main drug product types: new drugs, generic drugs, and over-the-counter*

The United States Food and Drug Administration (FDA or US FDA) is a federal agency of the Department of Health and Human Services. The FDA is responsible for protecting and promoting public health through the control and supervision of food safety, tobacco products, caffeine products, dietary supplements, prescription and over-the-counter pharmaceutical drugs (medications), vaccines, biopharmaceuticals, blood transfusions, medical devices, electromagnetic radiation emitting devices (ERED), cosmetics, animal foods & feed and veterinary products.

The FDA's primary focus is enforcement of the Federal Food, Drug, and Cosmetic Act (FD&C). However, the agency also enforces other laws, notably Section 361 of the Public Health Service Act as well as associated regulations. Much of this regulatory-enforcement work is not directly related to food or drugs but involves other factors like regulating lasers, cellular phones, and condoms. In addition, the FDA takes control of diseases in the contexts varying from household pets to human sperm donated for use in assisted reproduction.

The FDA is led by the commissioner of food and drugs, appointed by the president with the advice and consent of the Senate. The commissioner reports to the secretary of health and human services. Marty Makary is the current commissioner.

The FDA's headquarters is located in the White Oak area of Silver Spring, Maryland. The agency has 223 field offices and 13 laboratories located across the 50 states, the United States Virgin Islands, and Puerto Rico. In 2008, the FDA began to post employees to foreign countries, including China, India, Costa Rica, Chile, Belgium, and the United Kingdom.
